

Product Fact Sheet

Synthetic 2- Step Power Steering Kit

Smart Blend Synthetic Power Steering Flush & Protect 2-Part System. By utilizing the unique Synthetic Flush (Step one in the 2-part system) harmful contaminants within the power steering system are flushed away with old fluid, cleansing and preparing the system for new power steering fluid. After evacuating the contaminated fluid, install the Synthetic Protectant System. (Step two in the 2-part system) to increase fluid life, reduce whines, eliminate pump noise and ensure proper performance.

Synthetic Power Steering Flush (STEP 1) is a uniquely blended synthetic oil base power steering system flush for use in all types of power steering units. When the flush is introduced into the system it safely cleans and removes damaging deposits and impurities. Smart Blend Synthetic Power Steering Flush can be used with or without a flush machine.

Synthetic Power Steering Fluid Protectant (STEP 2) eliminates whines and noise in power steering systems. The advanced synthetic technology found in our Power Steering Fluid Protectant conditions seals and O rings, protects and prolongs fluid and system life and frees sticky turbines and pumps, while ensuring proper drivability. Smart Blend Synthetic Power Steering Fluid Protectant eliminates the need to stock multiple OEM fluids. It converts regular power steering fluid into a universal SLF (Special Lubricating Fluid) to be used in vehicles such as: Honda, Chrysler, Toyota, GM, Ford & others.

Package

2 – 4oz. Bottles - 6 kits / cs

Part

14000S
